SUMMARY

Product manager for platforms, payments and AI features, in product since 2019 after starting in customer success at INFLCR in 2018. Took Influencer from $50K to $10M+ ARR and 250,000+ users, launched General Manager from scratch to about $3.5M ARR, and shipped an external marketplace API, an in-house AI tagging model and Ask Teamworks, an AI agent now used by 100+ organizations. Co-founded LiftFlow and built the product myself: $200K ARR and 30 paying customers in about a year.

PROFESSIONAL EXPERIENCE

Teamworks (acquired INFLCR) **Jul 2018 – Oct 2026**

Senior Product Manager, NIL Operations (Influencer and General Manager)

Director of Technical Operations · Director of Product, Influencer · Director of Athlete Engagement & Client Success

- Launched General Manager from scratch in November 2024 (multi-year revenue-share and NIL budgeting, agreements, cash flows, compensation benchmarks) and grew it to about $3.5M ARR across 100+ athletic departments including Michigan and Texas A&M.
- Owned Influencer from fewer than 100 users to 250,000+ and $50K to $10M+ ARR, with 200M+ photos: media search and sharing, NIL deals, contract signing and athlete payouts.
- Product manager for two custom builds: NASCAR's Driver Incentive Program, used daily by every driver to manage engagements and get paid (about $1M over five years), and NCAA NIL Assist, the NCAA's official NIL platform for student-athletes.
- Sole PM for payments: built them from scratch across Stripe, PayPal and an in-house wallet into a platform that has processed $500M+ and roughly 300,000 payments since 2021.
- Renegotiated processing terms with payment providers, saving customers about $50,000 a year in fees and cutting settlement time by two days so athletes get paid faster.
- Moved AI photo tagging from AWS Rekognition to an in-house model for 200+ universities in one quarter in 2026, in five LaunchDarkly waves ranked by customer health, with accuracy tracked by tag type in Datadog. Cut tagging cost almost 80%, saving six figures a year, and shut off always-on Custom Labels models for nearly $50,000 more.
- Wrote the system prompts and 20 to 100 golden evals per product for Ask Teamworks, a Mastra-built assistant on Claude that answers coaches' and GMs' pay and roster questions with permission checks on sensitive data. Adopted by 100+ organizations in 2026.
- Built an internal admin platform with Claude Code in 2025 so product success could create accounts and resync profiles without engineering tickets, cutting new-account onboarding from two weeks to one.
- Owned launch readiness for two products: greenlit deploys, ran feature-flagged rollouts from 0% to general availability, often within 24 hours, and published weekly release and bug updates for support and go-to-market.
- Led a cross-functional team of 15 product managers, designers and engineers without direct authority; standardized the PRD template, design reviews and release decision rights the team worked from.
- Wrote the spec and docs for an external Influencer API that about 10 marketplaces, including Cameo, use to propose deals, message athletes and create and transfer payments; supported partner developers through launch. Millions of dollars moved through it.

Client Success Leadership (INFLCR, before and through acquisition)

- Hired and led a 6-person client success team; drove $500K in renewal ARR in summer 2019 and helped merge INFLCR's client success and product teams into Teamworks after its $25M Series C.
- Built INFLCR's Pro Athlete Network, activating 500+ NBA and NFL athletes. 2021 Company MVP and Sales Assist awards.

LiftFlow **2025 – Present**

Co-founder

- Built LiftFlow, B2B SaaS for independent commercial elevator service companies, as the sole developer using Claude Code and Claude Design; $200K ARR and 30 paying customers in about 12 months.
- Shipped MCP connectors after seeing customers preferred working in Claude or ChatGPT over our in-app assistant.

EDUCATION

University of South Carolina **May 2018**

B.S., Hospitality, Retail, and Sport & Entertainment Management, Minor in Business Administration, GPA 3.8

SKILLS & TOOLS

Platform and API product management, payments (Stripe, PayPal, KYC), feature-flag rollouts, LLM evals, SQL. Linear, Jira, Notion, Figma, LaunchDarkly, GitLab, Datadog, Sentry, BigQuery, Salesforce, Intercom, Gong, Claude Code, Claude Design, Cursor, Mastra.
